## SPECIFICATION

## Part No. : AP.10E.07.0039B

Product Name : AP.10E-1 Stage 15dB 39mm 0.81 with IPEX MHFI (U.FL compatible)

Feature : World smallest GPS/GALILEO active patch High performance<br>Ultra low power consumption<br>RoHS Compliant

## 1. Introduction

AP.10E active GPS/GALILEO patch antenna is the smallest GPS high performance antenna currently available in the world. Using extremely sensitive high dielectric constant powder formulation and tight process control the 10*10*4mm patch antenna is accurately tuned to have its frequency band right at 1575.42 MHz for GPS systems. With an ultra low power consumption one stage LNA, this small active patch has the performance of an ordinary active patch, but at only a quarter of the size.

This product is suited to small form factor mobile devices such as GPS Smartphones, Personal Location, Medical devices, Telematic devices and Automotive navigation and tracking. Custom gain, connector and cable versions are available. The AP.10E consists of 2 functional blocks - the LNA and also the patch antenna.

I-PEX + cable

## 7. Plugs Usage Precautions

### 7.1. Mating / Unmating

(1) To disconnect connectors, insert the end portion of I-PEX under the connector flanges and pull off vertically, in the direction of the connector mating axis.
(2) To mate the connectors, the mating axes of both connectors must be aligned and the connectors can be mated. The "click" will confirm fully mated connection. Do not attempt to insert on an extreme angle.

### 7.2. Pull forces on the cable after connectors are mated

After the connectors are mated, do not apply a load to the cable in excess of the values indicated in the diagram below.
